

Veterinarian Shortage Situation Nomination Form

To be submitted under the authority of the chief State or Insular Area Animal Health Official

Veterinary Medicine Loan Repayment Program (VMLRP)

This form must be used for Nomination of Veterinarian Shortage Situations to the Veterinary Medicine Loan Repayment Program (VMLRP), Authorized Under the National Veterinary Medical Service Act (NVMSA)

Note: Please submit one separate nomination form for each shortage situation. See the State Animal Health Official (SAHO) section of the VMLRP web site (www.nifa.usda.gov/vmlrp) for the number of nominations permitted for your state or insular area.

Location of Veterinary Shortage Area for this Nomination

Location of Veterinary Shortage: Service Area 3: Practice area to include portions of Alachua, Columbia, Gilcrest, Lafayette, Suwannee, Hamilton, Bradford, Union, and the North Part of Marion
(e.g., County, State/Insular Area; must be a logistically feasible veterinary practice service area)

Approximate Center of Shortage Area (or Location of Position if Type III): Intersection of CR 49 with US Hwy 27; Branford, FL 32008
(e.g., Address or Cross Street, Town/City, and Zip Code)

Overall Priority of Shortage: High Priority

Type of Veterinary Practice Area/Discipline/Specialty (select one) :

Type II: Private Practice - Rural Area, Food Animal Medicine (awardee obligation: at least 30% FTE or 12hr/week)

For Type I or II Private Practice:

Must cover(check at least one)

- Beef Cattle
- Dairy Cattle
- Swine
- Poultry
- Small Ruminant
- Other: _____

May cover

- Beef Cattle
- Dairy Cattle
- Swine
- Poultry
- Small Ruminant
- Other: Cervidae

For Type III Public Practice:

Employer: _____ Position Title: _____

Please select **one or more** specialty/disciplinary areas:

- Food Safety
- Public Health
- Epidemiology
- Other: _____

(Optional) If the nominator wishes to specify a service time for this shortage situation that is higher than the minimum required for the shortage type checked above, please specify the percent time in the box below (based on a 40-hour work week). Leave the box blank if the service time for this shortage situation is for the minimum percent time of the shortage type indicated.

50 %

Please describe the **importance and objectives** of a veterinarian filling this shortage situation as well as being located in the community, area, state/insular area, or position requested above (limit your response to 1500 characters).

This shortage area is in a rural north central area of Florida, with an estimated 211,000 cattle and 143,000 cows. It includes 50 large dairies, and many smaller farms with beef cattle and small ruminants. Recently, captive cervidae herds have increased in this area. There are 11 actively practicing veterinarians (30% or more of their time in food animal practice) working within this area. These veterinarians also provide veterinary services to a large number of horses and to companion animals.

This service or practice area, with a radius of 50-60 miles, extends over portions of nine counties. It is primarily rural (Branford has a population of less than 1,000 people), but there are population centers and residential areas scattered among the ranches and farms. This practice area has been designated as a Type II shortage area, as equine and possibly companion animal work will be required to ensure practice viability.

Please describe the **activities** of a veterinarian meeting this shortage situation in the community, area, state/insular area, or position requested above (limit your response to 1500 characters or less).

Small producers and small ruminant producers – This is a growing component of food animal practice in this area. The large ethnic population in the state consumes a large amount of small ruminant product; therefore, the industry is exploding. Urban sprawl has resulted in an increasing number of small producers with limited knowledge of basic herd health and management. These producers desire to have individual animal care more frequently than do the large producers.

- All aspects of herd health and general management
- Emergency care
- Education

Dairy herds – This is a large dairy shed region of the state. Most dairies in this area are >600 head of milking animals. Veterinarians involved with these dairies are working with the management as well as some individual animal care. They are important in the development of management plans for each class of animals that includes health and welfare of the individuals and the herd as a whole. This industry is proactive in meeting consumer desires for a healthy, wholesome product.

- Consultation and herd health
 - Reproductive management
 - Vaccination programs
 - Prescriptions (Withdrawal issues, approved product concerns)
 - Heifer development
- Nutrition management and problem solving

Please describe any past efforts to recruit and retain a veterinarian in the shortage situation identified above (limit your response to 750 characters or less).

While past efforts to recruit and retain food animal veterinarians are not well documented, efforts have been made to hire and retain food animal veterinarians in this shortage area. Surveys of producers and veterinarians have indicated that problems of insufficient income, more hours worked, and the physical hardships have made it more difficult to recruit and retain food animal veterinarians.

The smaller production farms in this area have made food animal practice less economically viable, and less amenable to recruitment or retention efforts. There is, however, demand, particularly if companion animal practice is coupled with a 50% or more food animal practice.

Please describe the risk of this veterinarian position not being secured or retained. Include the risk(s) to the production of a safe and wholesome food supply and to animal, human, and environmental health not only in the community but in the region, state/insular area, nation, and/or international community (limit your response to 2000 characters or less).

Risk of not securing or retaining positions:

- Negative Impact on Animal/Farm or Ranch Health and Welfare
 - Many farms or ranches, particularly smaller operations, will not have access to veterinary services
 - Individual animals and herds will lack preventative veterinary care, and diagnostic services and treatment resulting in increased animal morbidity and mortality
 - Increased production and economic losses to producers
 - Lack of expertise and consultation to promote overall health and welfare through improved vaccinations, nutrition, and reproductive programs
- Negative Impact on Community/State/Federal Food Animal Industries
 - Undiagnosed and untreated disease transmission within herds and between adjacent herds or exposure in marketing channels
 - Lack of first line of defense in recognizing and reporting suspected foreign or emerging diseases of significant concern to state and federal officials for emergency investigation and response (Florida is at very high risk of foreign animal disease introduction because of its geographic location, climate, and high volume of international trade)
 - Lack of immediate or farm action to limit disease spread and initiate regulatory action can have enormous negative economic impact on producer, community, state and national industry for highly contagious reportable diseases
 - Reduction in overall animal health and welfare with increased public concerns relative to humane treatment
- Negative Impact on Food Safety/Public Health/Environment
 - Lack of guidance and direction on selection and usage of vaccines and drugs to enhance efficacy and food safety
 - Lack of guidance and directions on issues such as drug withdrawal times, carcass disposal, and zoonotic disease risks

SAHO nominator must check both boxes below in order for NIFA to consider this nomination for official designation

- By checking this box, I affirm that this form represents a nomination and is subject to NIFA review and approval.
- By checking this box, I affirm that it is my professional opinion that this is a bona fide food supply or public health-related veterinary shortage situation. I affirm due diligence has been invested to identify this area as a shortage situation of at least moderate priority (severity).

Authorized State or Insular Area Animal Health Official or designee:

Name: Michael A. Short, D.V.M.

Title: State Veterinarian, Director

Division of Animal Industry, Florida Department of Agriculture and Consumer Services

Organization: _____
